

[\(00:01\)](#):

The TB DIAH Data Hub is an online portal offering both public and secure work areas to support USAID TB program managers, technical advisors, and country stakeholders with data analysis and reporting. The Hub helps users contextualize and apply data to their programming. Data in the Hub is organized on the site to reflect the US Government's Global TB Strategy objectives detailed here. This video will guide you through the basic navigation and elements of the public side of the Hub. The data used to generate visualizations on the Hub come from the World Health Organization and are updated when new data are available.

[\(00:42\)](#):

TB DIAH has assembled 14 summary charts showing trends in reaching TB patients, curing TB patients, preventing TB infections, and sustaining the TB program for all of the USAID TB priority countries. In addition, the Hub hosts 10 detailed charts for each of the USAID TB priority countries, as well as five countries from Eastern Europe. The Hub also has a section focused on indicators supporting USAID's Performance-Based Monitoring, and Evaluation framework, which we are calling the PBMEF.

[\(01:18\)](#):

The PBMEF will be the focus of a separate video guide, so be sure to check back for it when it goes live. If you're looking for more information on the project or other resources such as national guidelines or publications on TB, click over to the main TB DIAH website using the links at the very top right. To get back to the Data Hub, you can always select the link directly to the Data Hub in the header or from the button on the homepage. To navigate within the Hub, use the links and menus in the second tier navigation bar to the right of the word Data Hub in the header to explore the objectives, dashboards or PBMEF. You'll notice that the navigation bar follows you as you scroll down the page, so you can access it easily at any time without having to scroll back up to the top.

[\(02:08\)](#):

There are several ways to explore and engage with TB data from USAID Priority Countries in the Hub. You might want to start by looking at the summary dashboard, which shows aggregated data from the USAID TB priority countries with explanations to help you interpret the data. Hovering over an icon line or bar in the chart identifies the name of the country or the year that it represents. Also, clicking the icon in the legend box can be used to customize a data set.

[\(02:38\)](#):

The summary dashboard also has a number of charts under each objective, which you can scroll through or navigate to directly from the buttons in the explore the data by objective section. Any chart type in the site that has multiple data elements can be adjusted to focus on the data that interests you the most. By selecting a specific data element in the key below the chart, you can remove or select it again to re-add that specific data element. Once you have the chart displayed the way you would like, select the line menu displayed in the chart to view or download a copy of the underlying data. Download a copy of the chart and more. These downloads are available in multiple formats as seen in this menu. Once you download the charts, you can easily add them to a presentation or document and share with a broader audience.

[\(03:30\)](#):

To view the country dashboard for a specific country, start by selecting country dashboards in the navigation menu under dashboards. On this page, you can select your country of choice to see the charts. As you can see, each country dashboard displays data reflecting that country's performance in the US global TB strategy objective areas. To help contextualize a country's status on key TB indicators,

the PBMEF helps USAID staff who work on tuberculosis embedded TB advisors, national TB program managers, and other key stakeholders to track progress against TB targets in the country and manage USAID's TB investments all in one place. As mentioned, the PBMEF section of the Hub will be explored in more detail in a separate video, so here's just a taste of the information available at your fingertips.
